

Code Mass Quantities of Comments Easily and Accurately

Ascribe Accelerator mimics the precision of manual coding at a rate of tens of thousands of open-ended comments per hour, using a powerful combination of non-rules based NLP and machine learning.

Automated	Reduced cycle time
Cost efficient	Less variability
Globally accessible	Increased consistency
Scalable	Large volume capabilities
Secure	Supports major languages
Single-source solution	Data integration
Web-based	Self-Service or Outsourced

Automated Results with Human Precision

Ascribe Accelerator is a unique technology, because it blends automated coding with human expertise. Sophisticated linguistic and pattern matching algorithms adjust for any jargon or grammatical variations found in the comments. Integrates well with Ascribe Coder and Ascribe Illustrator.

POWERFUL

Ascribe Accelerator is an industrial-strength, automated coding technology designed to categorize meaning by automatically classifying large amounts of data at less cost.

SCALABLE

This Machine Learning technology applies examples previously coded manually to train itself, and then codes new content automatically, enabling Ascribe Accelerator to learn by example and ramp up quickly.

COMPATIBLE

A reliable alternative to outsourced options or manual coding of continuous surveys, Ascribe Accelerator can be used with any survey or data collection software.

MULTI-LINGUAL

Ascribe Accelerator can be trained to code English, Spanish, French and German comments.

Even in the largest of conversations, understanding the different voices is important. Once a library of comment examples is established, Ascribe Accelerator creates an automated coding model for categorization of all new content. The result is the ability to code large amounts of data quickly, consistently and inexpensively.
